PROFESSIONAL SUMMARY

Ex-Amazonian infrastructure engineer with 8+ years of experience building and running large-scale AWS environments. My background spans software engineering, DevOps, SRE, and working directly with executive teams. AWS Certified Solutions Architect Professional and DevOps Engineer Professional, along with several other AWS certifications.

CORE COMPETENCIES

- AWS: Compute, networking, storage, databases, containers, serverless, security, observability, automation, and multi-account architecture
- Azure: Tenant management and migration, Azure Functions, SQL Database
- Terraform, CloudFormation, CDK
- Docker, ECS, Kubernetes, EKS, Lambda
- GitHub Actions, GitLab CI, Travis CI, AppVeyor CI, AWS CodePipeline
- IAM, Security Hub, CloudTrail, AWS Config, RBAC
- JavaScript, Go, Python, Bash, PowerShell

PROFESSIONAL EXPERIENCE

Career Break — Full-Time Parent *July 2025 – Present*

AWS — Senior Technical Account Manager *September 2021 – June 2025*

- Acted as the primary technical advisor for a portfolio of enterprise AWS accounts, reviewing architectures against the AWS Well-Architected Framework and helping customers prioritize remediation.
- Worked directly with CTOs and VPs of Engineering on infrastructure, reliability, and cost issues, helping them make technical decisions around their AWS environments.
- Found inefficiencies across compute, storage, and account architecture that helped customers save millions of dollars in annual AWS spend.
- Led customers through high-severity production incidents, coordinating AWS service teams and customer engineers to restore service and identify root causes.
- Helped engineering teams improve security, availability, and operational practices so they could manage and maintain their environments independently.
- Represented AWS at re:Invent 2024, helping run the Cloud Governance booth and answering architecture and governance questions from customers around the world.

Aptive Environmental — DevOps Engineer Lead *April 2021 – September 2021*

- Designed and rolled out a multi-account AWS environment, giving engineering teams isolated accounts they could manage independently.
- Audited AWS infrastructure and removed or resized underused resources, reducing monthly cloud spend without impacting application performance.
- Standardized monitoring and alerting across environments using New Relic and PagerDuty, making it easier for engineers to identify and respond to production issues.
- Managed GitLab permissions and access for the engineering team, implementing least-privilege access and addressing issues found during an internal security review.
- Mentored junior and mid-level engineers on AWS architecture and CI/CD, helping them become more comfortable managing the platform themselves.

Cricut — Senior Site Reliability Engineer *August 2020 – April 2021*

- Raised infrastructure compliance to 90% by rolling out AWS Security Hub and continuous configuration monitoring.
- Built automation with AWS Systems Manager that eliminated recurring manual maintenance work and freed the team to focus on platform improvements.
- Set up automated audit trails and security alerts using AWS CloudTrail and Config.
- Migrated the organization to a multi-account AWS structure with centralized AWS SSO, simplifying access across teams.

Verisys — Cloud Architect *December 2019 – August 2020*

- Led the migration of legacy on-premise infrastructure to AWS, moving applications and infrastructure into a more reliable and easier-to-manage environment.
- Reviewed and resized compute resources and moved workloads to managed AWS services, reducing operating costs.
- Designed a multi-account AWS architecture that separated environments and business units from each other.

Cricut — DevOps Engineer *April 2018 – December 2019*

- Migrated core infrastructure to AWS using CloudFormation, making it easier to scale and recover from failures.
- Built shared service discovery libraries and maintained the team's automated build pipelines.
- Maintained core GitHub repositories and introduced a structured peer review process for code changes.

Upwell — Software Engineer *April 2017 – March 2018*

- Containerized monolithic applications with Docker and moved them to AWS ECS, reducing infrastructure costs and simplifying deployments.
- Built features used across the company, supporting legal compliance, digital marketing, and core business operations.

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional (Jan 2024)
- AWS Certified DevOps Engineer – Professional (Aug 2026)
- AWS Certified Security – Specialty (Oct 2020)
- AWS Certified Developer – Associate (Sep 2020)
- AWS Certified Solutions Architect – Associate (Mar 2020)
- AWS Certified Cloud Practitioner (Feb 2020)
