PROFESSIONAL SUMMARY

Ex-Amazonian with 8+ years running AWS infrastructure at scale, most recently as a Senior TAM guiding Fortune 500 engineering teams through cost, reliability, and security decisions. Before AWS, I built and operated infrastructure across DevOps, SRE, and cloud architecture. AWS Certified Solutions Architect Professional and DevOps Engineer Professional.

CORE COMPETENCIES

- AWS: Broad experience across AWS services, including multi-account architecture, compute, networking, security, databases, containers, and serverless
- Azure: Tenant management and migration, Azure Functions, SQL Database
- Terraform, CloudFormation, CDK
- Docker, ECS, Kubernetes, EKS, Lambda
- GitHub Actions, GitLab CI, Travis CI, AppVeyor CI, AWS CodePipeline
- IAM, Security Hub, CloudTrail, AWS Config, RBAC
- JavaScript, Go, Python, Bash, PowerShell

PROFESSIONAL EXPERIENCE

Career Break — Full-Time Parent *July 2025 – Present*

AWS — Senior Technical Account Manager *September 2021 – June 2025*

- Primary technical advisor for 20+ enterprise AWS customers, including several Fortune 500 accounts, some spanning hundreds of individual AWS accounts. Ran Well-Architected Framework reviews and prioritized remediation work with each.
- Trusted technical point of contact for CTOs and VPs of Engineering on infrastructure, reliability, and cost decisions.
- Identified cost inefficiencies across their AWS environment worth millions of dollars annually; on one \$55M/month AWS account, moving off a paid CloudTrail configuration alone cut spend by \$140K/month.
- Coordinated AWS service teams and customer engineers during high-severity production incidents to restore service and drive root-cause analysis.
- Advised engineering teams on AWS best practices and Well-Architected Framework recommendations, helping them take more ownership of their AWS environments.
- Represented AWS at re:Invent 2024, staffing the Cloud Governance booth and fielding architecture and governance questions from customers worldwide.

Aptive Environmental — DevOps Engineer Lead *April 2021 – September 2021*

- Designed and rolled out a multi-account AWS environment so engineering teams could manage their own isolated accounts.
- Audited AWS infrastructure to find underused resources; removed or resized them to cut monthly cloud spend without affecting application performance.
- Set up consistent monitoring and alerting across environments with New Relic and PagerDuty, making production issues easier to detect and respond to.
- Overhauled GitLab permissions to implement least-privilege access, resolving findings from an internal security review.
- Mentored junior and mid-level engineers on AWS architecture and CI/CD as they took on more ownership of the platform.

Cricut — Senior Site Reliability Engineer *August 2020 – April 2021*

- Raised infrastructure compliance to 90% by rolling out AWS Security Hub and continuous configuration monitoring.
- Automated recurring maintenance work with AWS Systems Manager, freeing the team to focus on deployments and other tasks.
- Configured automated audit trails and security alerting with AWS CloudTrail and Config.
- Migrated the organization to a multi-account AWS structure with centralized AWS SSO for simplified cross-team access.

Verisys — Cloud Architect *December 2019 – August 2020*

- Led the migration of legacy on-premise infrastructure to AWS, replacing it with a more reliable, easier-to-manage environment.
- Right-sized compute resources and shifted workloads onto managed AWS services to lower operating costs.
- Designed a multi-account AWS architecture to separate environments and business units.

Cricut — DevOps Engineer *April 2018 – December 2019*

- Migrated core infrastructure to AWS using CloudFormation, improving scalability and failure recovery.
- Built the team's shared service discovery libraries and maintained its automated build pipelines.
- Owned core GitHub repositories and introduced a structured peer review process for code changes.

Upwell — Software Engineer *April 2017 – March 2018*

- Containerized monolithic applications with Docker and moved them to AWS ECS, cutting infrastructure costs and simplifying deployments.
- Built features used across the company, supporting core business operations.

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional (Feb 2021)
- AWS Certified DevOps Engineer – Professional (Aug 2023)
- AWS Certified Security – Specialty (Oct 2020)
- AWS Certified Developer – Associate (Sep 2020)
- AWS Certified Solutions Architect – Associate (Mar 2020)
- AWS Certified Cloud Practitioner (Feb 2020)
