PROFESSIONAL SUMMARY

Infrastructure leader with 8+ years operating and modernizing large-scale AWS environments, spanning hands-on platform engineering, DevOps leadership, and enterprise technical advisory. AWS Certified Solutions Architect and DevOps Engineer at the Professional level. Track record of building secure, self-service platforms that let engineering teams ship independently, cutting cloud spend through disciplined governance, and mentoring engineers into stronger infrastructure practitioners. Comfortable operating as a player-coach: writing Terraform and debugging incidents one day, briefing executives on platform strategy the next.

CORE COMPETENCIES

- Platform & Infrastructure: AWS (Organizations, IAM, Route53, ECS, EKS, Lambda, EC2, VPC, RDS, DynamoDB), multi-account landing zones, self-service developer platforms
- Infrastructure as Code: Terraform, CloudFormation
- Containers & Orchestration: Docker, Kubernetes
- CI/CD & Developer Enablement: GitHub Actions, GitLab CI, environment automation, release engineering
- Observability & Reliability: CloudWatch, New Relic, PagerDuty, incident response, on-call program design
- Security & Governance: AWS Security Hub, CloudTrail, Config, SSO, least-privilege access, CSPM, patch management
- Languages & Tooling: Go, Python, JavaScript, Bash, PowerShell, Git, GitHub, GitLab
- Leadership: team building and mentorship, cost governance, cross-functional partnership with Security, Data, and IT

PROFESSIONAL EXPERIENCE

Career Break — Full-Time Parent

July 2025 – Present

AWS — Senior Technical Account Manager

September 2021 – June 2025

- Acted as the primary technical advisor for a portfolio of enterprise AWS accounts, reviewing architectures against the AWS Well-Architected Framework and turning findings into prioritized remediation roadmaps.
- Partnered directly with CTOs and VPs of Engineering to translate infrastructure risk and cost data into decisions leadership could act on, keeping technical tradeoffs tied to business outcomes.
- Identified structural inefficiencies across compute, storage, and account architecture that collectively saved client organizations millions of dollars in annual cloud spend.
- Led customers through high-severity production incidents, coordinating internal AWS teams and customer engineers to restore service within SLA and run the resulting root-cause reviews.
- Coached engineering teams on security baselines, high-availability design, and operational readiness, building the internal capability to sustain those practices without ongoing hand-holding.

Aptive Environmental — DevOps Engineer Lead

April 2021 – September 2021

- Designed and rolled out a multi-account AWS landing zone that gave engineering teams isolated, self-service environments while raising the org's overall security posture.
- Audited underutilized infrastructure and restructured resource allocation, materially lowering monthly cloud spend without impacting performance.
- Unified monitoring and alerting across environments by integrating New Relic and PagerDuty, cutting time-to-detection for production issues.
- Set GitLab governance and least-privilege access standards for the engineering department, closing gaps identified in an internal security review.
- Mentored junior and mid-level engineers on AWS architecture patterns and CI/CD practices, building a bench of engineers who could operate the platform independently.

Cricut — Senior Site Reliability Engineer

August 2020 – April 2021

- Raised infrastructure compliance to a 90% score by rolling out AWS Security Hub and continuous configuration monitoring.
- Built automation frameworks on AWS Systems Manager that eliminated recurring manual maintenance work, freeing the team to focus on platform improvements instead of tickets.

- Stood up automated audit trails and real-time security alerting using AWS CloudTrail and Config.
- Migrated the organization to a multi-account structure with centralized AWS SSO, simplifying access governance across teams.

Verisys — Cloud Architect*December 2019 – August 2020*

- Led the end-to-end migration of legacy on-premise infrastructure into a highly available, secure AWS environment.
- Rightsized compute and shifted workloads to managed AWS services, delivering immediate reductions in operating cost.
- Designed a multi-account architecture that enforced blast-radius isolation between environments and business units.

Cricut — DevOps Engineer*April 2018 – December 2019*

- Migrated core infrastructure to AWS using CloudFormation, improving horizontal scalability and fault tolerance.
- Built centralized service discovery libraries and maintained the health of automated build pipelines.
- Maintained core GitHub codebases and introduced structured peer code review to raise code quality across the team.

Upwell — Software Engineer*April 2017 – March 2018*

- Containerized monolithic applications with Docker and moved them onto AWS ECS, substantially reducing infrastructure spend.
- Built cross-departmental features supporting legal compliance, digital marketing, and core business operations.

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional (Jan 2024)
- AWS Certified DevOps Engineer – Professional (Aug 2023)
- AWS Certified Security – Specialty (Oct 2020)
- AWS Certified Developer – Associate (Sep 2020)
- AWS Certified Solutions Architect – Associate (Mar 2020)
- AWS Certified Cloud Practitioner (Feb 2020)
